

How to add your app to your phone

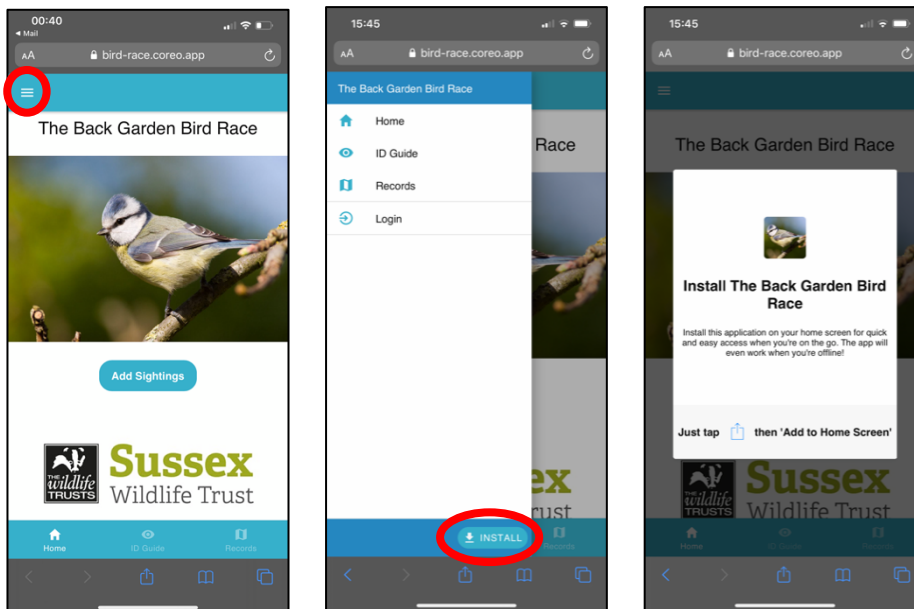

The app you have been sent a link to is accessed just like a website to begin with.

To view the app on your mobile device and add it to your home screen first enter, or click on, the app's URL from the device you wish to use. If you are typing it in the URL is:

<https://bird-race.coreo.app/>

This will open the "app" in your device's browser. Android and iOS handle adding the app to the home screen in different ways. Android will prompt you to add the app to your home screen as soon as you visit the URL.

If you are an iOS user then when viewing the app within Safari, tap the hamburger menu (image 1) and then the Install button (image 2). Then follow the instructions from image 3

Your app will now appear as an icon on your home screen.
